## Qualification

EBMA Level 6 Graduate Diploma in Health and Social Care Management

## Level

6

## Guided Learning Hours

480

## Total Qualification Time Hours

1200

## Credit Value

120

## Qualification Objective

The EBMA level 6 Graduate Diploma in Health and Social Care Management is designed to equip learners with underpinning knowledge, understanding and skills for success in employment in the Health and Social Care sector at a management level. EBMA Level 6 Graduate Diploma in Health and Social Care Management allows learners to demonstrate their skills by producing evidence from their work activities, to meet national occupational standards. Learners will acquire care management skills in the Health and Social Care sector.

## Assessment

Assessment is through practical assignments, with no exams - to more accurately reflect the real working environment.

## Unit Structure of the Qualification

Unit number	Units	Unit level	Unit credit
9	Principles of Social Work Practice	6	24
10	Human Physiology	6	24
11	Ethics and Values in Social Work Practice	6	24
12	Counselling Skills and Theory in Health and Social Care	6	24
13	Research in Health Sciences	6	24

## Assessment Grades

Marks Ranges %	Marking Criteria
80 -100	<b>Distinction:</b> All learning outcomes are achieved. All assessment criteria are met at a outstanding level.
60-79	<b>Merit:</b> All learning outcomes are achieved. All assessment criteria are met at a good level.
40-59	<b>Pass:</b> All learning outcomes are achieved. All assessment criteria are met at a satisfactory level.
0-39	<b>Fail:</b> All learning outcomes are not achieved. All assessment criteria are not met.
No Marks	Plagiarism

## UNIT SPECIFICATIONS

### Unit Title

Principles of Social Work Practice

### Level

6

### Guided Learning Hours

96

### Learning Time Hours

240

### Credit Value

24

### Aim

This course aims to examine and develop, at an advanced level, the practice knowledge and skills required to be a social worker within a continuum of health care contexts. Learners will get knowledge of different applications of value and ethical dimensions of social work practice with diverse populations are examined and illustrated throughout this unit.

## Learning Outcomes

1. Understand groups, types and theories and practice in social work.
2. Understand psychological ideas, strategic approaches, and levels of change of circular causality in social care practice.
3. Evaluate range of ideas about change and their relevance to social work practice.
4. Investigate different challenges and limitations of theories in social care organisational context.

## Learning outcomes and assessment criteria

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning Outcome	Assessment Criteria
<b>LO1</b> Be able to understand groups, types and theories and practice in social work.	<p><b>AC 1.1</b> Define the concept of social work and discuss different groups of service users, different context and settings.</p> <p><b>AC 1.2</b> Identify why social workers, like other professionals need a clear rationale for what they do.</p> <p><b>AC 1.3</b> Explain different types of social workers i.e advocacy, executive, and combined.</p> <p><b>AC 1.4</b> Identify how different theoretical approaches may challenge or complement each other's in social work.</p>
<b>LO2</b> Be able to understand psychological ideas, strategic approaches, and levels of change of circular causality in social care practice.	<p><b>AC 2.1</b> Analyse psychodynamic models of cause and effect of social care practice.</p> <p><b>AC 2.2</b> Evaluate applications of psychodynamic models and present oriented approaches of behaviourism in cause and effect of social care.</p> <p><b>AC 2.3</b> Identify ways in which social workers and other professionals deal with service user fail to be effective holders in Rogers's theory in social work.</p>
<b>LO3</b> Be able to evaluate range of ideas about change and their relevance to social work practice.	<p><b>AC 3.1</b> Identify different roles of social workers and explain key issues related to it.</p> <p><b>AC 3.2</b> Evaluate advocacy and empowerment role of social worker and limitation associated with empowerment.</p> <p><b>AC 3.3</b> Identify care manager role of needs-led assessment and direct payments.</p> <p><b>AC 3.4</b> Discuss ways and difficulties in inter professional working to confidentiality and privacy.</p> <p><b>AC 3.5</b> Evaluate explicit and implicit use of coercive power in a theory of control.</p>
<b>LO4</b> Be able to investigate different challenges and limitations of theories in social care context.	<p><b>AC 4.1</b> Explain why social work that is taught in books or publications is different from social work in practice.</p> <p><b>AC 4.2</b> Identify ways in which social workers make excessive claims of expertise, with resulting harmful consequences.</p> <p><b>AC 4.3</b> Assess why supervision is a form of feedback in social work practice.</p>

## UNIT SPECIFICATIONS

### Unit Title

Human Physiology

### Level

6

### Guided Learning Hours

96

### Learning Time Hours

240

### Credit Value

24

### Aim

This unit aims to equip learners in biomedical/life science and sport science in health and social care context with value added knowledge and skills that will enhance their understanding and expertise in human physiology in its broadest sense.

### Learning Outcomes

1. Understand organisation of body, nutrition and blood transport in human physiology and health.
2. Understand sense perception and coordination system.
3. Identify growth and development process of child and its inheritance and variation in human physiology.
4. Investigate biotechnology and ecosystems in health care management system.

### Learning outcomes and assessment criteria

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning Outcome	Assessment Criteria
<b>LO1</b> Be able to understand organisation of body, nutrition and blood transport in human physiology and health.	<p><b>AC 1.1</b> Identify how cells forms tissues and explain main tissues in human body.</p> <p><b>AC 1.2</b> Explain the principles of enzyme action and assess how changes in temperature PH affect enzyme action.</p> <p><b>AC 1.3</b> Identify the basic requirements of a healthy balanced diet.</p> <p><b>AC 1.4</b> Identify how the products of digestion used by human body.</p> <p><b>AC 1.5</b> Identify the main internal and external structures of the heart and explain the reasons and causes of high blood pressure.</p>
<b>LO2</b> Be able to understand sense perception and coordination system.	<p><b>AC 2.1</b> Identify the causes of eye defects in long and short sight and suggest its solutions.</p> <p><b>AC 2.2</b> Identify the structure of the eye and the functions of its main parts.</p> <p><b>AC 2.3</b> Describe the organisation of nervous system and discuss the roles of the different components.</p> <p><b>AC 2.4</b> Identify how central nervous system (CNS) is protected</p>

	from injury.
<b>LO3</b> Be able to identify growth and development process of child and its inheritance and variation in human physiology.	<p><b>AC 3.1</b> Identify the role of the parents in providing for the physical and emotional needs of their child.</p> <p><b>AC 3.2</b> Use graphical representation to discuss patterns of growth and development after birth</p> <p><b>AC 3.3</b> Explain the main stages in the motor, emotional, social and mental development of a child.</p> <p><b>AC 3.4</b> Assess the behaviour of chromosomes during ordinary cell division and reduction division.</p> <p><b>AC 3.5</b> Identify how the environment may cause variation among inheritance characteristics.</p>
<b>LO4</b> Be able to investigate biotechnology and ecosystems in health care management system.	<p><b>AC 4.1</b> Examine the processes involved in transferring genes from one organism to another.</p> <p><b>AC 4.2</b> Identify how genetic engineering is being used to improve crop plans and animals.</p> <p><b>AC 4.3</b> Assess the components of and interactions within ecosystems.</p> <p><b>AC 4.4</b> Explain the nutritional types of an ecosystem and identify their feeding relationships.</p>

Ethics and Values in Social Work Practice

### Level

6

### Guided Learning Hours

96

### Learning Time Hours

240

### Credit Value

## Aim

This course aims deepen learners understanding of the philosophical basis of good practice in social work, and to enhance their ability to think systematically about the moral issues that they may face in workplace.

## Learning Outcomes

1. Identify the ethical issues of social work in the United Kingdom in 21st Century.
2. Analyse ethical and character based principles approaches to social work practice.
3. Identify the importance of service delivery models to meet the needs of individuals.
4. Understand professionalism and codes of ethics in social work practice.
5. Understand social workers' responsibilities including policies, procedures and managerialism and be able to understand ethical problems and dilemmas in practice in social work.

## Learning outcomes and assessment criteria

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning Outcome	Assessment Criteria
<b>LO1</b> Be able to identify the ethical issues of social work in the United Kingdom in 21st Century.	<p><b>AC 1.1</b> Identify a situation/incident as a practitioner that raise ethical issues in social work practice.</p> <p><b>AC 1.2</b> Identify issues relating to barriers social work practice in the United Kingdom.</p> <p><b>AC 1.3</b> Assess ethical principles that underpin practice as a social worker.</p> <p><b>AC 1.4</b> Explain the concept of social work as a human service profession.</p>
<b>LO2</b> Be able to analyse ethical and character based principles approaches to social work practice.	<p><b>AC 2.1</b> Identify respect and autonomy in the social work partnership by analysing the concept presented by Kantia.</p> <p><b>AC 2.2</b> Discuss utilitarian principles of promoting justice and welfare in society.</p> <p><b>AC 2.3</b> Analyse the challenge of radical and anti-oppressive principle of commitment to emancipation and social justice.</p> <p><b>AC 2.4</b> Explain Beauchamp and Childress (2001) approach of 'common morality' to ethics.</p> <p><b>AC 2.5</b> Assess virtue based approaches to the importance of character in the professional role.</p> <p><b>AC 2.6</b> Explain diversity, narrative and constructionism in the light of postmodern ethics.</p>
<b>LO3</b> Be able to identify the importance of service delivery models to meet the needs of individuals.	<p><b>AC 3.1</b> Explain the concept of service delivery model in health care organisation.</p> <p><b>AC 3.2</b> Identify how Service delivery model analyse physical and emotional needs of individuals.</p> <p><b>AC 3.3</b> Identify how service delivery model analyse social and educational needs of individuals.</p> <p><b>AC 3.4</b> Assess rationale behind service delivery model to improve health care problems.</p>
<b>LO4</b> Be able to understand professionalism and codes of ethics in social work practice.	<p><b>AC 4.1</b> Identify legal attributes of a social worker profession and explain why professional culture is sustained by formal professional associations.</p> <p><b>AC 4.2</b> Assess forms and contents of codes of ethics in the United Kingdom for social work organisations.</p> <p><b>AC 4.3</b> Identify why codes of ethics are useful in social work practice.</p>
<b>LO5</b> Be able to understand social workers' responsibilities including policies, procedures and managerialism and be able to understand ethical problems and dilemmas in practice in social work.	<p><b>AC 5.1</b> Discuss the concept presented by Downie and Loudfoot four different types of right and duties on ethics.</p> <p><b>AC 5.2</b> Discuss Leighton (1985) argument for the separation of personal, professional and agency values in social work practice.</p> <p><b>AC 5.3</b> Explain the relationship between personal, agency professional and societal moral codes of ethics.</p> <p><b>AC 5.4</b> Identify different ethical issues and reasons for their increment and suggest arguments to justify them.</p>

## UNIT SPECIFICATIONS

### Unit Title

Counselling Skills and Theory in Health and Social Care

### Level

6

### Guided Learning Hours

96

### Learning Time Hours

240

### Credit Value

24

### Aim

This course enables learners to develop counselling skills that can be applied in their present or potential work settings. The course aims to enable participants:- to gain a fuller understanding of self, and of self in relationships; to describe the values, concepts, skills and approaches of counselling for health professionals; to apply counselling approaches in their own helping context; and to become a more effective helper through the use of counselling skills.

### Learning Outcomes

1. Understand key aspects, skills and approaches of counselling for health professionals.
2. Identify main approaches and models of counselling.
3. Apply theoretical model of counselling to groups and individuals.
4. Identify ethical issues to the working relationship between counsellor and client.

### Learning outcomes and assessment criteria

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning Outcome	Assessment Criteria
<b>LO1</b> Be able to understand key aspects, skills and approaches of counselling for health professionals.	<b>AC 1.1</b> Explain different forms and process of counselling. <b>AC 1.2</b> Discuss the importance of counselling training. <b>AC 1.3</b> Explain the importance of Egan (1994) structural model of counselling. <b>AC 1.4</b> Identify psychodynamic, behavioural and humanistic approaches of counselling.
<b>LO2</b> Be able to Identify main approaches and models of counselling.	<b>AC 2.1</b> Identify key concepts and limitation of psychodynamic model of counselling. <b>AC 2.2</b> Assess Alfred Adler theory of individual psychology and personality development. <b>AC 2.3</b> Evaluate Erikson's psychosocial stages of development and link it with object relations theory with psychodynamic theory of counselling. <b>AC 2.4</b> Identify the significance of Maslow's work in relation to counselling.
<b>LO3</b> Be able to apply theoretical model of counselling to groups and individuals.	<b>AC 3.1</b> Identify aims and objectives for the group. <b>AC 3.2</b> Examine problems or difficulties associated in the life of a support group. <b>AC 3.3</b> Identify different stages of group development. <b>AC 3.4</b> Assess why people join group and explain common characteristic to all groups. <b>AC 3.5</b> Apply orientation, conflict and cohesion stages for group life for counselling services to individuals.
<b>LO4</b> Be able to identify ethical issues to the working relationship between counsellor and client.	<b>AC 4.1</b> Explain how confidentiality is one of the most important aspects of the counselling relationships. <b>AC 4.2</b> Identify reasons for referral within the ethical framework of BACP. <b>AC 4.3</b> Assess how ethical relationship between supervisor and supervisee support for counsellor. <b>AC 4.4</b> Identify how to help clients in crisis.

## UNIT SPECIFICATIONS

### Unit Title

**Level**

6

**Guided Learning Hours**

96

**Learning Time Hours**

240

**Credit Value**

24

**Aim**

The aim of this course is to introduce learners with the principles and practice of a range of research designs used in health and social sciences. Learners will be able to identify the most appropriate designs for different research questions, design a study to answer a specific research question and critically appraise the work of others.

**Learning Outcomes**

1. Appreciate characteristics of methods for conducting enquiry to solve health problems.
2. Aware of strategy selection for effective research planning in health care organisation.
3. Identify issues and methods of sampling and their validity.
4. Apply techniques for effective research and design in health care organisation and complete research project.

**Learning outcomes and assessment criteria**

In order to pass this unit, the evidence that the learner presents for assessment needs to demonstrate that they can meet all the learning outcomes for the unit. The assessment criteria determine the standard required to achieve the unit.

Learning Outcome	Assessment Criteria
<p><b>LO1</b> Be able to appreciate characteristics of methods for conducting enquiry to solve health problems.</p>	<p><b>AC 1.1</b> Define method and explain some common methods for conducting an enquiry.  <b>AC 1.2</b> Explain qualitative and quantitative approaches to research and compare them.  <b>AC 1.3</b> Discuss how method is applied to conducting health sciences research.</p>
<p><b>LO2</b> Be able to be aware of strategy selection for effective research planning in health care sector.</p>	<p><b>AC 2.1</b> Identify how research questions are selected and justified and derived from research aims  <b>AC 2.2</b> Assess research strategies available for specific types of investigations in health care organisations.  <b>AC 2.3</b> Explain the ethical and economic constraints on the planning and implantation of research.</p>
<p><b>LO3</b> Be able to identify issues and methods of sampling and their validity.</p>	<p><b>AC 3.1</b> Identify relative advantages and disadvantages of commonly used sampling methods.  <b>AC 3.2</b> Identify the relationship between sampling error and sample size.  <b>AC 3.3</b> Examine the internal and external validity for generalizing research findings.</p>
<p><b>LO4</b> Be able to apply techniques for effective research and design in health care organisation and complete research project.</p>	<p><b>AC 4.1</b> Identify the use of surveys in health sciences research.  <b>AC 4.2</b> Assess the characteristics of designs involving naturalistic comparisons, correlations and quasi experiments.  <b>AC 4.3</b> Identify the construction and administration of questionnaires.  <b>AC 4.4</b> Calculate percentages, ratios and rates in the statistical research methods.  <b>AC 4.5</b> Design research problem and apply research methodology by using appropriate research method.  <b>AC 4.5</b> Present results and conclusions in suitable format.</p>
